## SECTION 1

# System Overview

The **CRM Platform** is a secure, web-based system designed to manage a team of field agents, distribute customer leads, and track agent activity. It provides two separate portals — one for administrators and one for agents — with strict role-based access controls.

## Portals

| PORTAL       | URL                                                                   | WHO USES IT           |
|--------------|-----------------------------------------------------------------------|-----------------------|
| Login Page   | <a href="http://localhost:3000/">http://localhost:3000/</a>           | Everyone              |
| Admin Portal | <a href="http://localhost:3000/admin">http://localhost:3000/admin</a> | Admins & Super Admins |
| Agent Portal | <a href="http://localhost:3000/agent">http://localhost:3000/agent</a> | Field Agents          |

## User Roles

### ★ Super Admin

Full system control. Creates admin accounts, resets any password, permanently deletes users, force-assigns leads, and accesses every feature.

### 🛡 Admin

Day-to-day operations. Manages agents, uploads leads, fulfils report requests, processes submissions, manages IPs and settings.

### 👤 Agent

Field worker. Extracts leads each period, views lead details, requests reports from admin, and submits lead details back.

## Technology Stack

| COMPONENT        | TECHNOLOGY                             |
|------------------|----------------------------------------|
| Backend          | Node.js + Express                      |
| Database         | SQLite (via better-sqlite3)            |
| Authentication   | JWT (JSON Web Tokens) via jsonwebtoken |
| Password Hashing | bcryptjs                               |
| Frontend         | Vanilla HTML/CSS/JavaScript            |
| File Uploads     | Multer (CSV leads + report files)      |

## SECTION 2

# User Accounts & Credentials

---

## Default Super Admin Account

### Super Admin — Default Credentials

Created automatically on first run if no admin exists

| FIELD            | VALUE       |
|------------------|-------------|
| Username         | admin       |
| Password         | Admin@123   |
| Role             | Super Admin |
| Session Duration | 48 hours    |

**⚠ IMPORTANT:** Change the default admin password immediately after first login. Go to Admin Portal → Agents → Edit your account.

## Demo Agent Accounts

The following agent accounts are pre-seeded on first startup (only if no agents exist yet). All share the same default password.

| USERNAME | FULL NAME       | PASSWORD  | ROLE  |
|----------|-----------------|-----------|-------|
| sarahj   | Sarah Johnson   | Agent@123 | Agent |
| miket    | Mike Thompson   | Agent@123 | Agent |
| emmad    | Emma Davis      | Agent@123 | Agent |
| jamesw   | James Wilson    | Agent@123 | Agent |
| lisac    | Lisa Chen       | Agent@123 | Agent |
| robertm  | Robert Martinez | Agent@123 | Agent |
| amandat  | Amanda Taylor   | Agent@123 | Agent |
| davidb   | David Brown     | Agent@123 | Agent |

## Session Duration

| ROLE                | TOKEN EXPIRES AFTER | NOTES                              |
|---------------------|---------------------|------------------------------------|
| Admin / Super Admin | 48 hours            | Longer session for management work |
| Agent               | 12 hours            | Expires at end of a working day    |

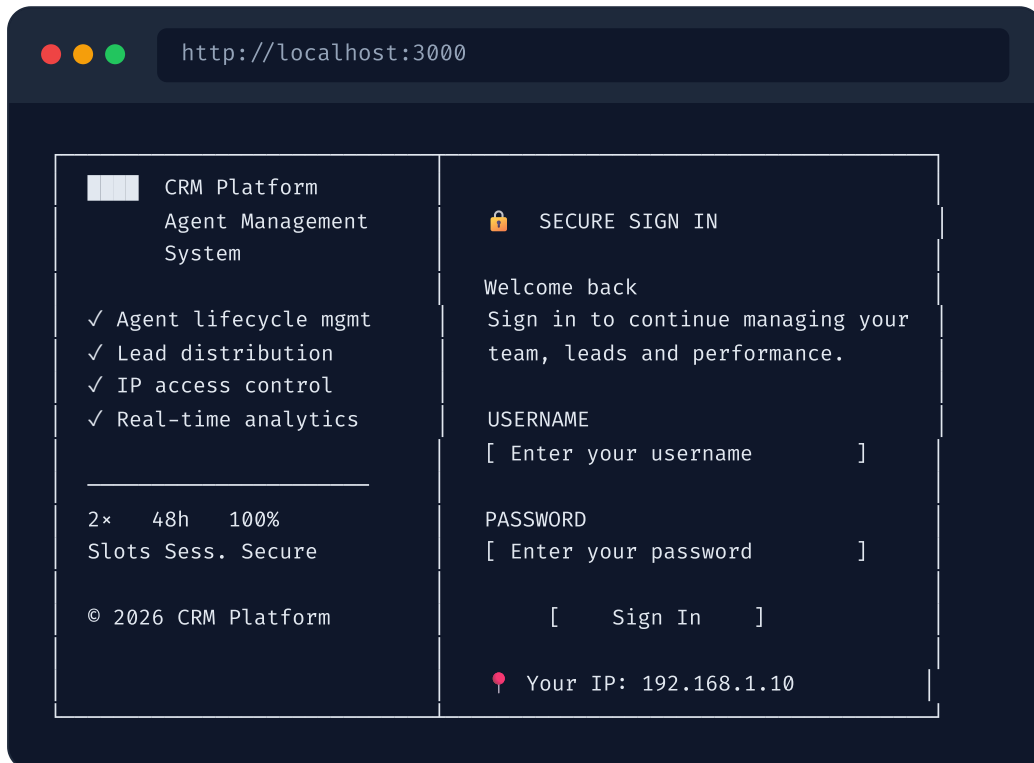

## Password Rules

- Minimum 4 characters (system enforced)
- Agents cannot reset their own passwords — admin must do it
- Super Admin can reset any user's password including other admins
- Passwords are hashed with bcrypt (cost factor 10) — never stored in plain text

## SECTION 3

# Logging In

Open your browser and navigate to `http://localhost:3000`. The login page has two panels:

## Steps to Log In

1. Enter your **Username** in the first field.
2. Enter your **Password** in the second field.
3. Click **Sign In**.
4. The system automatically redirects:
  - Admins / Super Admins → `/admin` (Admin Portal)
  - Agents → `/agent` (Agent Portal)

## Your IP Address

The login page shows your current IP address at the bottom. If the IP Whitelist is active, your IP must be on it for agents to log in successfully.

## Common Login Errors

| ERROR MESSAGE                    | CAUSE                        | FIX                                         |
|----------------------------------|------------------------------|---------------------------------------------|
| Invalid credentials              | Wrong username or password   | Check spelling; ask admin to reset password |
| Account is inactive              | Account deactivated by admin | Contact admin to re-activate                |
| System is currently offline      | Kill Switch is ON            | Admin must enable the system                |
| Access denied. IP not authorised | IP not in whitelist          | Admin must add your IP to the whitelist     |

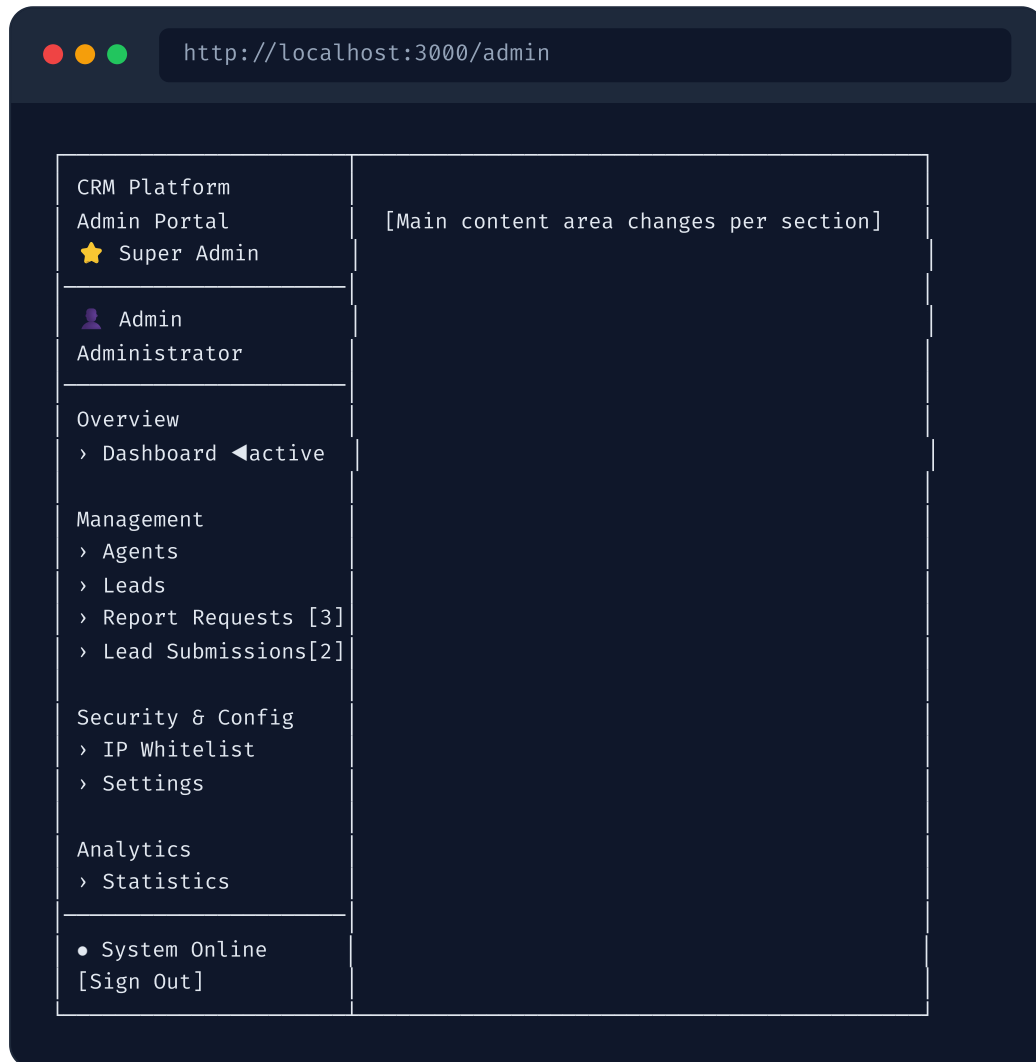

## Automatic Redirect

If you are already logged in (valid token in browser storage), navigating to [/](#) will automatically redirect you to the correct portal without showing the login form.

## SECTION 4

# Admin Portal

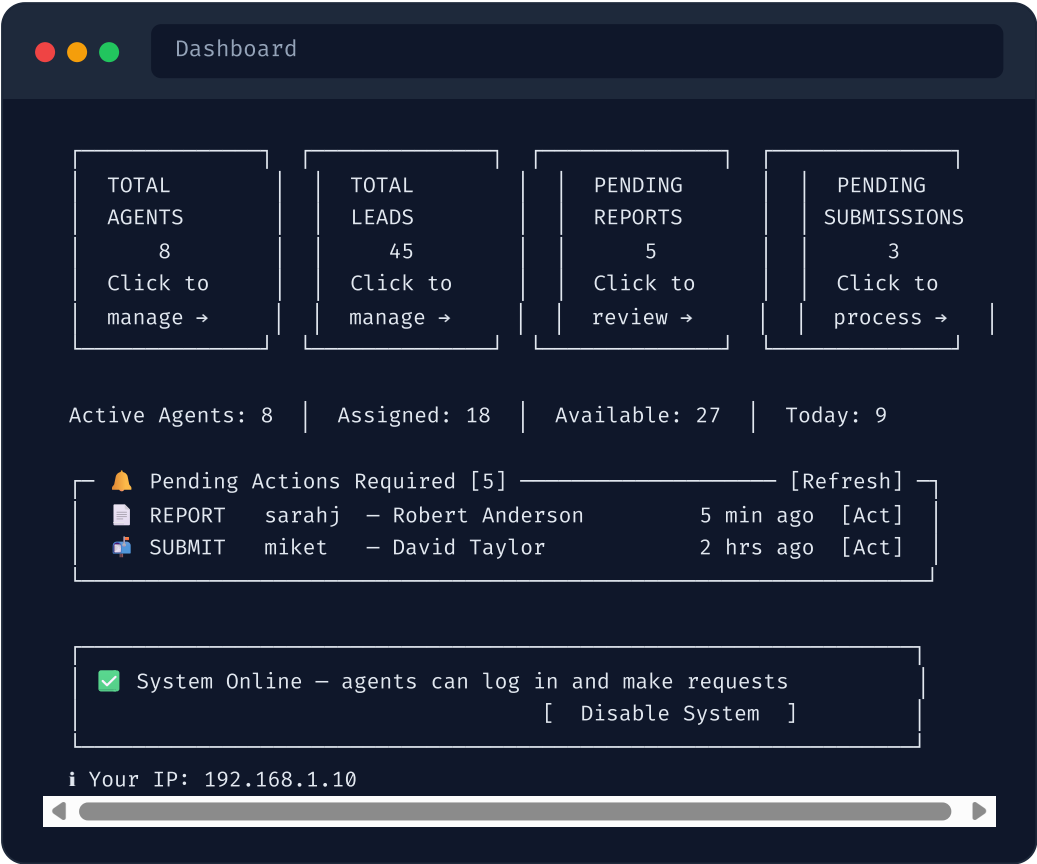

After logging in as admin or super admin, you arrive at `/admin`. The portal has a fixed sidebar on the left and a main content area on the right.

**i** The red number badges on **Report Requests** and **Lead Submissions** show how many items are pending your action. They update automatically when you open the dashboard.

# 4.1 — Dashboard

The dashboard is the first screen after login. It gives a real-time overview of the entire system.

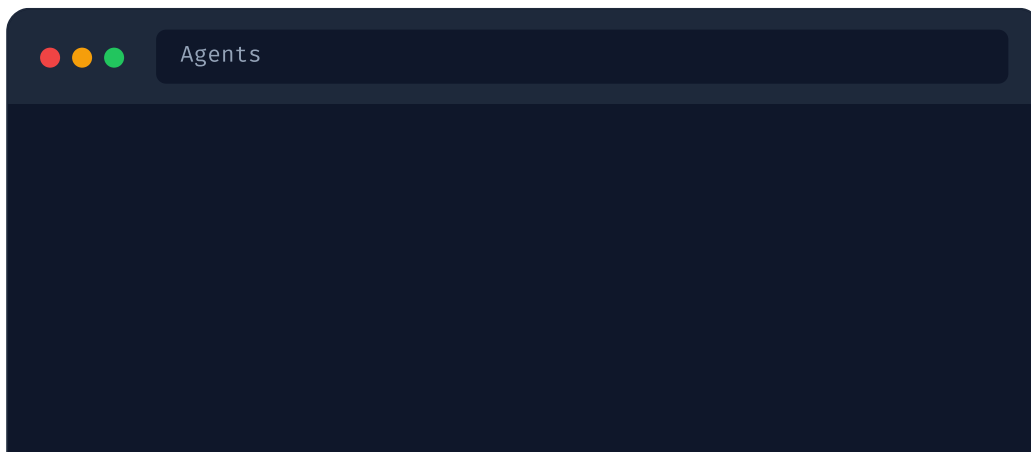

## Dashboard Elements

| ELEMENT                  | DESCRIPTION                                                                                            | CLICKABLE?                          |
|--------------------------|--------------------------------------------------------------------------------------------------------|-------------------------------------|
| Total Agents card        | Count of all agent accounts in the system                                                              | Yes — jumps to Agents               |
| Total Leads card         | Count of all leads in the database                                                                     | Yes — jumps to Leads                |
| Pending Reports card     | How many report requests need fulfilment                                                               | Yes — jumps to Reports              |
| Pending Submissions card | How many lead submissions need processing                                                              | Yes — jumps to Submissions          |
| Mini stat cards          | Active agents, assigned/available leads, today's extractions, fulfilled reports, processed submissions | Yes — each links to its section     |
| Pending Actions Panel    | Unified list of all pending items needing admin action                                                 | Yes — each row has an action button |
| Kill Switch box          | Toggle agent access on/off instantly                                                                   | Button only                         |

## 4.2 — Agents

Click **Agents** in the sidebar to manage all agent accounts.

[+ Add Agent]    [🔄 Refresh]

| Agent            | Username | Status   | Last Login | Leads | Rpts | Subs |
|------------------|----------|----------|------------|-------|------|------|
| SJ Sarah Johnson | sarahj   | • Active | 5 Jun 2026 | 6     | 2    | 2    |
| MT Mike Thompson | miket    | • Active | 5 Jun 2026 | 6     | 1    | 2    |
| ED Emma Davis    | emmad    | • Active | Never      | 6     | 1    | 1    |
| JW James Wilson  | jamesw   | • Active | Never      | 0     | 0    | 0    |

## How to Add a New Agent

1. Click **+ Add Agent**.
2. Fill in the modal form: Username, Full Name, Password, and Role.
3. Click **Create User**.

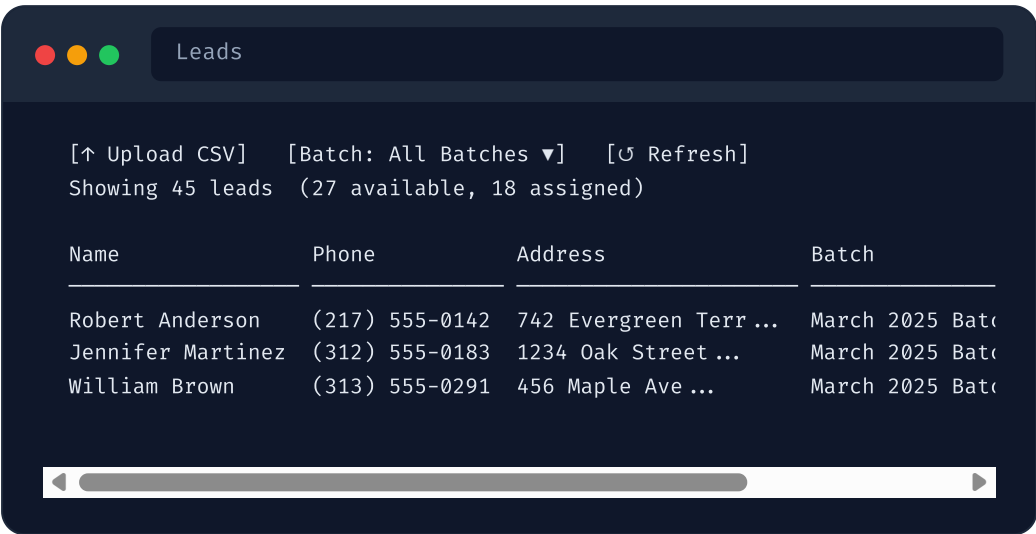

**i** Only Super Admins can set Role to "admin" or "superadmin". Regular admins can only create agent accounts.

## Available Actions per Agent

| Button             | Who Can Use         | What It Does                                                |
|--------------------|---------------------|-------------------------------------------------------------|
| Edit               | Admin & Super Admin | Update full name, active status, or set a new password      |
| View Leads         | Admin & Super Admin | See all leads assigned to this agent                        |
| Deactivate         | Admin & Super Admin | Disables the agent's login (soft delete — data preserved)   |
| Delete (Permanent) | Super Admin only    | Permanently removes agent and all their data (irreversible) |
| Reset Password     | Super Admin only    | Force-set a new password for any user                       |

## 4.3 — Leads

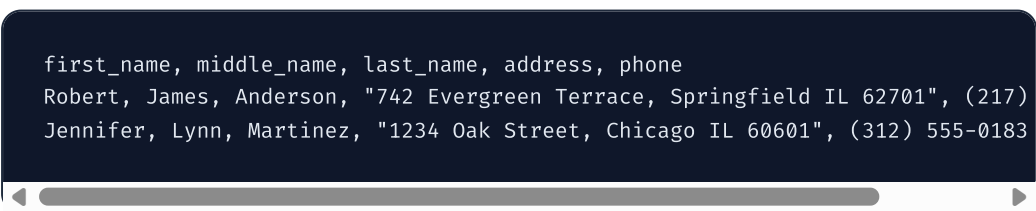

The leads section is where you manage the lead pool — upload CSV batches, view all assignments, and reassign leads.

### Uploading Leads via CSV

1. Click **↑ Upload CSV**.
2. Enter a **Batch Name** (e.g., "June 2026 Batch"). Defaults to today's date if blank.
3. Select your `.csv` file (max 50 MB).
4. Click **Upload**. The system imports and reports how many were added or skipped.

### CSV File Format

### Managing a Single Lead

Click **Manage** on any lead row to open the Lead Management modal. From here you can:

- **Assign** to an agent — select agent and period, then click Assign.
- **Return to Pool** — removes the current assignment; lead becomes available again.

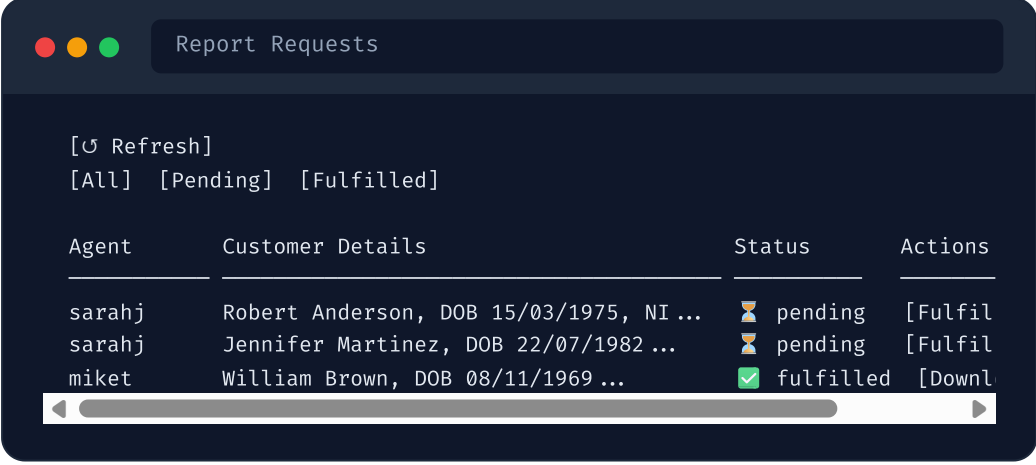

- **Reassign** — assign to a different agent (first returns to pool, then assigns).

## Batch Operations

- Filter by batch using the dropdown to view only one batch at a time.
- Click **Delete Unextracted Leads from Batch** to remove only unassigned leads. Assigned leads are always protected.
- Individual lead deletion is available per row via the **Delete** button.

## 4.4 — Report Requests

Agents submit customer details asking admin to pull a credit or background report. Admin fulfils requests by uploading the report file.

The screenshot shows a web application window titled "Report Requests". At the top, there are three colored window control buttons (red, yellow, green) and a title bar. Below the title bar, there is a search bar containing the text "Report Requests". Underneath the search bar, there are two links: "[Refresh]" and "[All] [Pending] [Fulfilled]". The main content area contains a table with the following data:

| Agent  | Customer Details                        | Status                                                                                          | Actions |
|--------|-----------------------------------------|-------------------------------------------------------------------------------------------------|---------|
| sarahj | Robert Anderson, DOB 15/03/1975, NI ... |  pending   | [Fulfil |
| sarahj | Jennifer Martinez, DOB 22/07/1982 ...   |  pending   | [Fulfil |
| miket  | William Brown, DOB 08/11/1969 ...       |  fulfilled | [Downl  |

At the bottom of the table, there is a horizontal scrollbar.

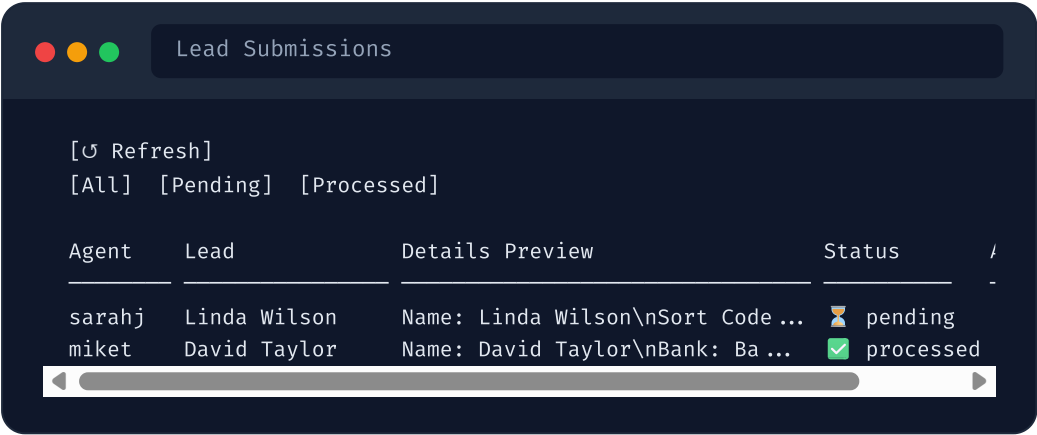

## How to Fulfil a Report Request

1. Find a **pending** request and click **Fulfil**.
2. The modal shows the full customer details the agent submitted.
3. Click **Choose File** and select the report (PDF, DOCX, or any format).
4. Optionally add an **Admin Note**.
5. Click **Upload & Fulfil**.

The agent will immediately see a **Download** button appear in their History section.

# 4.5 — Lead Submissions

Agents submit customer details (e.g., banking/financial information) to admin. Admin reviews and marks them processed.

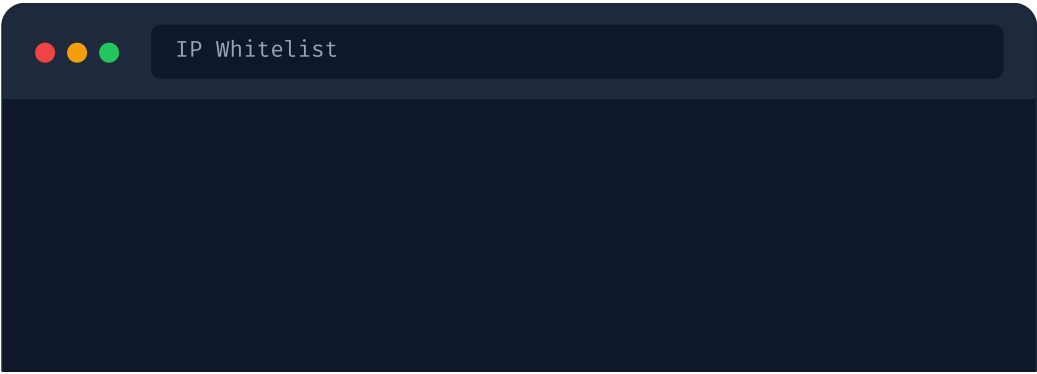

## How to Process a Submission

1. Click **Review** on a pending submission.
2. Read the full submission text (name, sort code, account, card details, etc.).
3. Set **Status** to `processed`.
4. Add an optional **Admin Note** (e.g., reference number, forwarding confirmation).
5. Click **Update Status**.

The agent can see the status change and your note in their History section.

# 4.6 — IP Whitelist

Controls which IP addresses can access the agent-facing API. **Admin access is never blocked by the whitelist.**

🔒 Your current IP: 192.168.1.10  
[+ Add IP]    [🔄 Refresh]

⚠️ When the list is EMPTY, all IPs are allowed (setup mode).  
Add your own IP first to avoid locking agents out.

| IP Address   | Description    | Added By | Date Added | Actions  |
|--------------|----------------|----------|------------|----------|
| 192.168.1.10 | Office main PC | admin    | 5 Jun 2026 | [Remove] |
| 10.0.0.5     | Agent PC #1    | admin    | 4 Jun 2026 | [Remove] |

## How to Add an IP

1. Click **+ Add IP**.
2. Enter the IP address (e.g., `192.168.1.50` ).
3. Optionally add a description (e.g., "Sarah's home PC").
4. Click **Add IP**.

## Important Rules

| WHITELIST STATE             | EFFECT                                                       |
|-----------------------------|--------------------------------------------------------------|
| <b>Empty</b> (no IPs added) | All IPs can connect — open/setup mode                        |
| <b>Has entries</b>          | Only listed IPs can access agent routes — all others get 403 |
| Admin portal                | Always accessible, regardless of whitelist                   |

⚠️ Always add your own IP before adding any others, or you may lock agents out of the system entirely.

## 4.7 — Settings

Configure system-wide behaviour. Accessible to both Admin and Super Admin.

Settings

Kill Switch

Instantly disable all agent access

[ Disable System ]

Lead Extraction Limits

Leads per Period: [ 15 ]      Period Split Hour: [ 12 ]

Period 1 = midnight to split hour  
Period 2 = split hour to midnight

[ ✓ Save Settings ]

⚡ Force Extract Leads (Super Admin Only)

Target Agent: [ Select agent ▼ ]    Period: [ Period 1 ▼ ]  
Leads: [ 10 ]      [ ⚡ Force Extract Now ]

## Settings Reference

| SETTING           | DEFAULT   | DESCRIPTION                                                      |
|-------------------|-----------|------------------------------------------------------------------|
| Kill Switch       | Off       | When ON, all agent logins and API requests are blocked instantly |
| Leads per Period  | 15        | Max leads an agent can extract in a single period (1–500)        |
| Period Split Hour | 12 (noon) | The 24-hour clock hour dividing Period 1 (AM) from Period 2 (PM) |

## Force Extract (Super Admin Only)

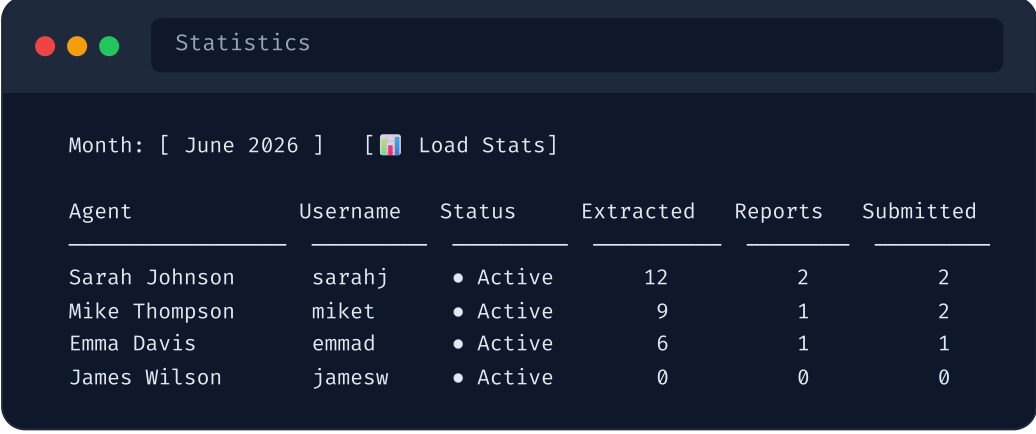

Bypasses normal per-period limits and directly assigns leads to a specific agent.

1. Select the **Target Agent** from the dropdown.
2. Choose which **Period** the leads are for.
3. Enter the **number of leads** to assign (max 200).

4. Click **Force Extract Now**.

## 4.8 — Statistics

Monthly performance analytics per agent. Click **Statistics** in the sidebar.

The screenshot shows a web application window titled "Statistics". At the top, there is a month picker set to "June 2026" and a button labeled "Load Stats" with a refresh icon. Below this is a table with six columns: Agent, Username, Status, Extracted, Reports, and Submitted. The table contains four rows of data for agents Sarah Johnson, Mike Thompson, Emma Davis, and James Wilson. All agents are listed as "Active".

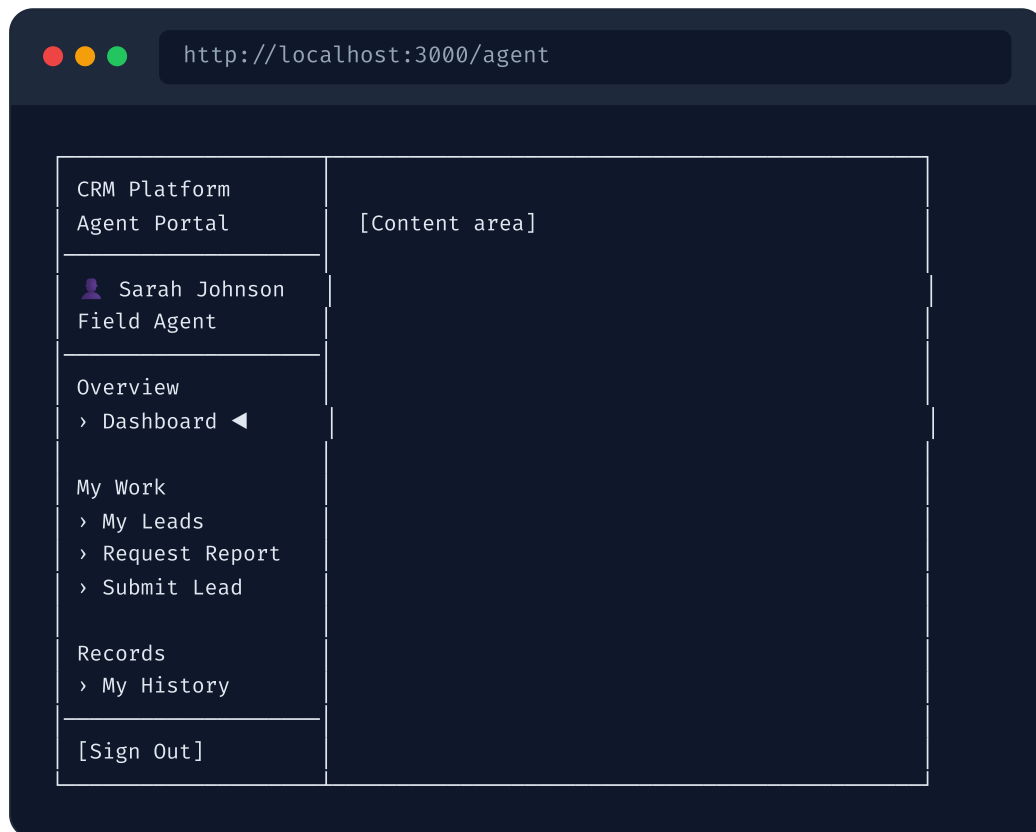

| Agent         | Username | Status   | Extracted | Reports | Submitted |
|---------------|----------|----------|-----------|---------|-----------|
| Sarah Johnson | sarahj   | • Active | 12        | 2       | 2         |
| Mike Thompson | miket    | • Active | 9         | 1       | 2         |
| Emma Davis    | emmad    | • Active | 6         | 1       | 1         |
| James Wilson  | jamesw   | • Active | 0         | 0       | 0         |

1. Select a **month** using the month picker (defaults to current month).
2. Click **Load Stats**.
3. Review the per-agent counts: Leads Extracted, Reports Requested, Leads Submitted.

## SECTION 5

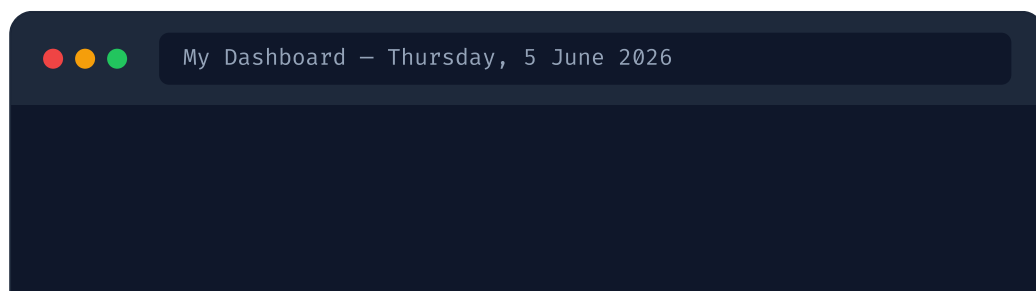

# Agent Portal

After logging in as an agent, you arrive at `/agent`. The portal has a compact sidebar with 5 navigation items.

## 5.1 — Dashboard & Lead Extraction

The agent dashboard shows today's lead extraction status across both periods.

Period 1 – MorningAM

15 / 15 leads  
All leads extracted!

100%

✓

All Leads Extracted

Period 2 – AfternoonPM

0 / 15 leads  
15 remaining

0%

[ Extract 15 Leads Now ]

Leads All Time: 21

Pending Reports: 2

Fulfilled: 1

✓

You have 1 fulfilled report(s) ready to download in My History.

i

How it works: Click Extract in each period to receive leads.

View in My Leads · Request Report · Submit Lead

## Understanding the Period System

| PERIOD   | TIME WINDOW (DEFAULT) | BADGE | WHEN ACTIVE            |
|----------|-----------------------|-------|------------------------|
| Period 1 | Midnight → 12:00 noon | AM    | Before split hour      |
| Period 2 | 12:00 noon → midnight | PM    | At or after split hour |

The split hour is configured by the admin (default: 12). Each period allows a fresh extraction of up to N leads (default: 15).

## How to Extract Leads

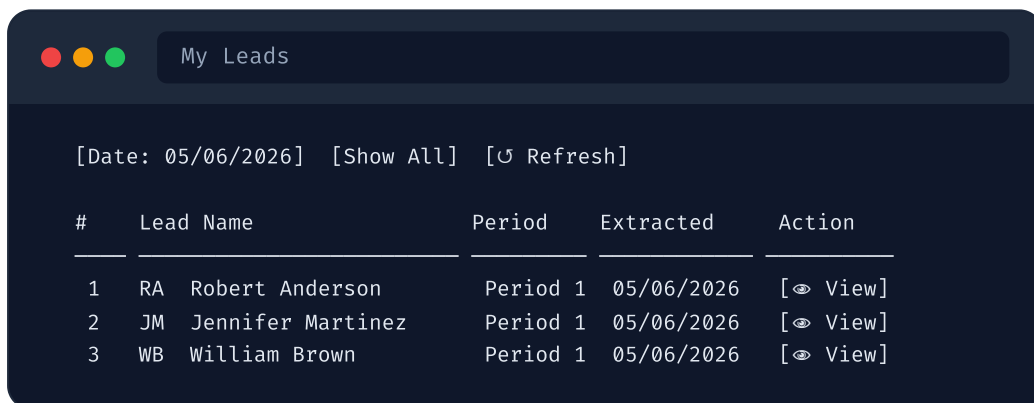

- During the **current active period**, the extract button is blue and shows the number of available leads.
- Click **Extract N Leads Now**.
- The system assigns leads from the pool to your account. Each lead is unique — once assigned to any agent, it cannot be given to another.
- The button turns green and shows "All Leads Extracted" when done.

## Extraction Button States

| BUTTON APPEARANCE                    | MEANING                                                       |
|--------------------------------------|---------------------------------------------------------------|
| Blue — "Extract N Leads Now"         | This period is active and you have leads remaining to extract |
| Green — "All Leads Extracted"        | You have already extracted the maximum for this period        |
| Grey — "Available in morning period" | This period is not yet active (wrong time of day)             |

## 5.2 — My Leads

View all leads assigned to you. Click **My Leads** in the sidebar.

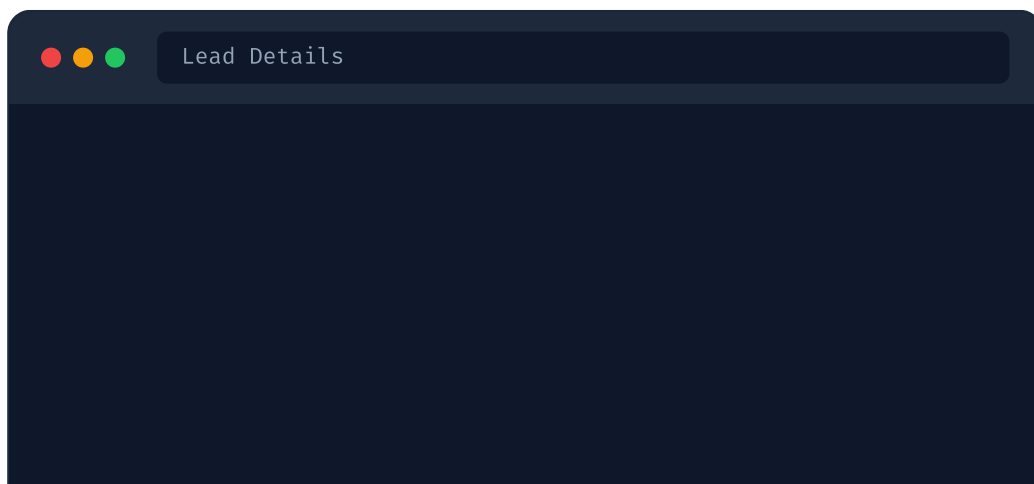

The screenshot shows a window titled "My Leads" with a dark theme. At the top, there are window control buttons (red, yellow, green) and a title bar. Below the title bar, there is a header area with the date "Date: 05/06/2026", a "Show All" button, and a "Refresh" button. The main content is a table with five columns: "#", "Lead Name", "Period", "Extracted", and "Action". The table contains three rows of data.

| # | Lead Name            | Period   | Extracted  | Action   |
|---|----------------------|----------|------------|----------|
| 1 | RA Robert Anderson   | Period 1 | 05/06/2026 | [👁 View] |
| 2 | JM Jennifer Martinez | Period 1 | 05/06/2026 | [👁 View] |
| 3 | WB William Brown     | Period 1 | 05/06/2026 | [👁 View] |

## Viewing Lead Details

Click any row or the **View** button to open the lead details popup:

Lead Details

Lead #1 · Period 1

FULL NAME  
Robert James Anderson

PHONE NUMBER  
(217) 555-0142

HOME ADDRESS  
742 Evergreen Terrace,  
Springfield, IL 62701

Extracted 05/06/2026 · Copying is disabled

**Note:** Lead details are copy-protected. Text selection, right-click, Ctrl+C, and drag are all disabled within the lead popup to protect customer data.

## 5.3 — Request Report

Use this to ask admin to pull a credit, background, or financial report for a customer. Click **Request Report**.

Request Report

New Report Request

SELECT LEAD (optional)  
[– Not linked to a specific lead – ▼]

CUSTOMER DETAILS

Enter customer details: full name, home address,  
date of birth, phone number, National Insurance  
number...

0 characters

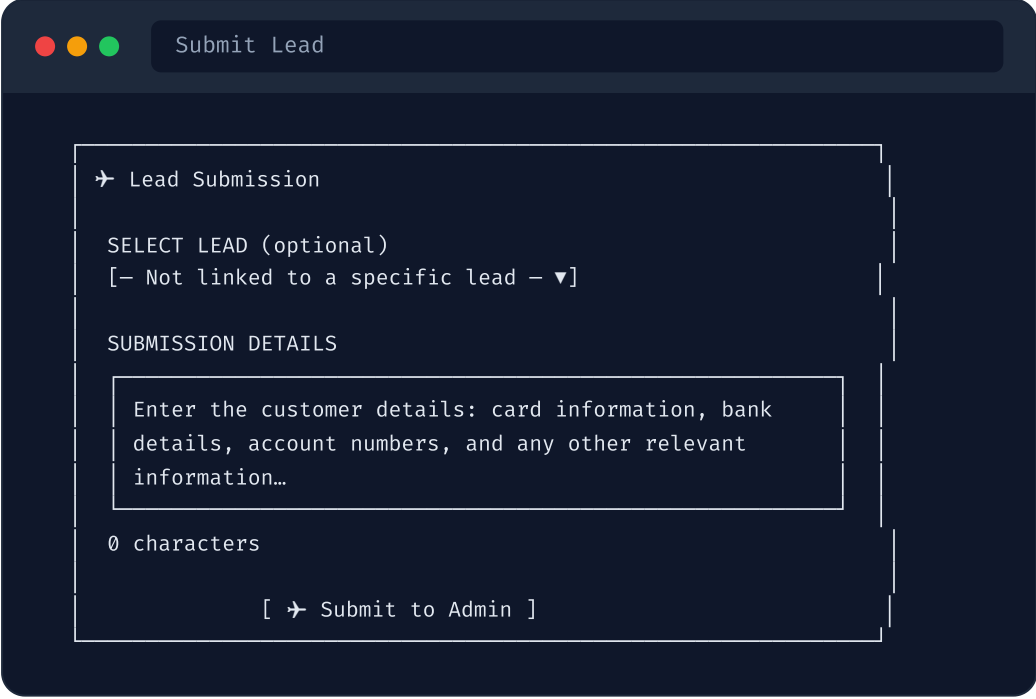

[ ✈ Send to Admin ]

## Steps

1. Optionally select a **lead** from the dropdown to link this request.
2. Fill in **Customer Details** — include: full name, date of birth, home address, phone number, National Insurance number.
3. Click **Send to Admin**.
4. When the admin uploads the report, you receive a notification on the Dashboard and can download it from **My History**.

## 5.4 — Submit Lead

Use this to send customer details (e.g., banking/card information) to the admin. Click **Submit Lead**.

The screenshot shows a dark-themed window titled "Submit Lead". Inside the window, there is a form with the following elements:

- A header section labeled "➤ Lead Submission".
- A dropdown menu labeled "SELECT LEAD (optional)" with the text "[– Not linked to a specific lead – ▼]" below it.
- A section titled "SUBMISSION DETAILS" containing a text input field with the placeholder text "Enter the customer details: card information, bank details, account numbers, and any other relevant information...".
- Below the text input field, it says "0 characters".
- At the bottom of the form, there is a button labeled "[ ➤ Submit to Admin ]".

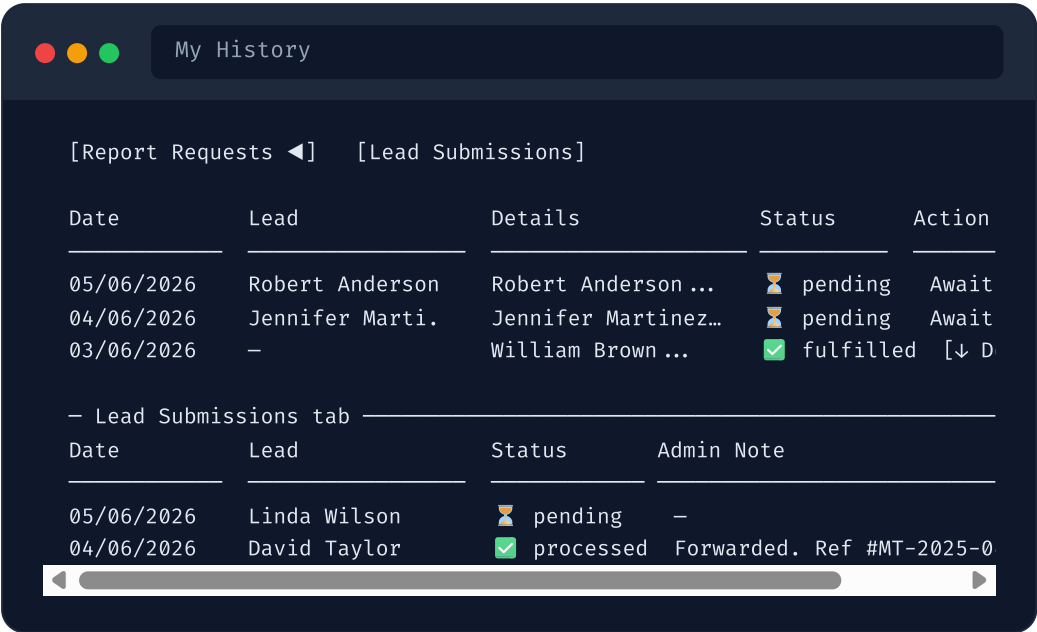

## Steps

1. Optionally link to one of your extracted leads using the dropdown.
2. Type all relevant customer details in the text box.
3. Click **Submit to Admin**.
4. Monitor the status in **My History** → **Lead Submissions**. When admin processes it, you'll see their note.

# 5.5 — My History

Track all your past activity. Click **My History**. The page has two tabs.

## Report Requests Tab

| STATUS           | MEANING                              | ACTION                                                  |
|------------------|--------------------------------------|---------------------------------------------------------|
| <b>pending</b>   | Admin hasn't uploaded the report yet | Awaiting admin (no action available)                    |
| <b>fulfilled</b> | Admin uploaded the report file       | <b>Download</b> button appears — click to save the file |

## Lead Submissions Tab

| STATUS           | MEANING                                                                       |
|------------------|-------------------------------------------------------------------------------|
| <b>pending</b>   | Admin has not reviewed it yet                                                 |
| <b>processed</b> | Admin marked it done — check the Admin Note column for a reference or message |

# System Concept Flow

---

# The Full Lifecycle

## STEP 1 – ADMIN SETUP

Admin uploads CSV of customer leads → they enter the lead pool  
Admin creates agent accounts (username + password)  
Admin configures: leads per period, period split hour  
Optionally: Admin adds IP addresses to the whitelist

## STEP 2 – AGENT MORNING (Period 1, before split hour)

Agent logs in → arrives at Dashboard  
Sees Period 1 card with extract button active  
Clicks "Extract Leads" → system assigns N unique leads to agent  
Agent views lead details (name, phone, address) in My Leads

## STEP 3 – AGENT WORKS LEADS

For each lead, agent can do one or both of:

### A) Request a Report:

Agent fills in customer info → clicks Send to Admin  
Admin sees request → pulls report → uploads PDF file  
Agent gets notification → downloads report from My History

### B) Submit Lead Details:

Agent types customer banking/card/financial info → submits  
Admin sees submission → reviews it → marks processed + adds  
Agent sees "processed" status + admin note in My History

## STEP 4 – AGENT AFTERNOON (Period 2, after split hour)

Agent returns → Period 2 card is now active  
Agent extracts another N leads  
Process repeats

## STEP 5 – ADMIN DAILY CHECK

Admin opens Dashboard → checks pending counts  
Admin goes to Report Requests → uploads fulfilled files  
Admin goes to Lead Submissions → reviews and processes  
Admin checks Statistics → tracks monthly agent performance

## Lead Pool Mechanics

| RULE         | DETAIL                                                                                                                                 |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------|
| Uniqueness   | Each lead can only be assigned to ONE agent. Once extracted, it is removed from the available pool.                                    |
| Availability | Leads without an extraction record are "available". Those with one are "assigned".                                                     |
| Return       | Admin can return a lead to the pool via the Manage modal — it becomes available again.                                                 |
| Order        | Agents receive leads in the order they appear in the database (not random by default for normal extraction; random for force-extract). |

## SECTION 7

# Security Features

---

## Request Security Pipeline

Agent Request arrives at /api/agent/\*

|

▼

[1] IP WHITELIST CHECK → IP not in list? → BLOCKED 403  
| IP allowed (or list is empty)

▼

[2] KILL SWITCH CHECK → Switch is ON? → BLOCKED 503  
| Switch is off

▼

[3] JWT TOKEN CHECK → No/invalid token? → BLOCKED 401  
| Token is valid

▼

[4] ROLE CHECK → Wrong role? → BLOCKED 403  
| Correct role

▼

✅ ACTION ALLOWED

## Role Permission Matrix

| FEATURE                   | AGENT | ADMIN | SUPER ADMIN |
|---------------------------|-------|-------|-------------|
| Extract leads             | ✓     | —     | —           |
| View own leads            | ✓     | —     | —           |
| Submit reports / leads    | ✓     | —     | —           |
| Manage agent accounts     | —     | ✓     | ✓           |
| Upload leads (CSV)        | —     | ✓     | ✓           |
| Fulfil report requests    | —     | ✓     | ✓           |
| Process submissions       | —     | ✓     | ✓           |
| IP Whitelist management   | —     | ✓     | ✓           |
| Kill switch control       | —     | ✓     | ✓           |
| System settings           | —     | ✓     | ✓           |
| Create admin accounts     | —     | —     | ✓           |
| Permanently delete users  | —     | —     | ✓           |
| Reset any user's password | —     | —     | ✓           |
| Force-assign leads        | —     | —     | ✓           |

## Lead Copy Protection

When an agent opens a lead detail popup, the following protections are active:

- Text selection is disabled (CSS `user-select: none` )
- Right-click context menu is blocked ( `contextmenu` event cancelled)
- Ctrl+C, Ctrl+A, Ctrl+S, Ctrl+P are blocked while the modal is open
- Drag-and-drop is disabled ( `dragstart` event cancelled)
- Clipboard writes are cleared even if selection is somehow obtained

## Additional Security Notes

| FEATURE            | DETAIL                                                                                                                  |
|--------------------|-------------------------------------------------------------------------------------------------------------------------|
| JWT Secret         | Set <code>JWT_SECRET</code> environment variable in production. Default hardcoded value must not be used in production. |
| Password storage   | Bcrypt with cost factor 10. Passwords are never stored in plain text.                                                   |
| Admin IP exemption | Only <code>/api/agent/*</code> routes are IP-checked. Admin portal is always reachable.                                 |
| Inactive accounts  | Deactivated users are blocked at login and at every API call (checked against DB).                                      |
| Token expiry       | Expired tokens force logout and redirect to login page.                                                                 |

## SECTION 8

# Troubleshooting

---

## Agent Cannot Log In

| SYMPTOM                            | LIKELY CAUSE               | FIX                                                 |
|------------------------------------|----------------------------|-----------------------------------------------------|
| "Invalid credentials"              | Wrong username or password | Admin → Agents → Edit → reset password              |
| "Account is inactive"              | Account was deactivated    | Admin → Agents → Edit → set Active = Yes            |
| "System is currently offline"      | Kill Switch is ON          | Admin → Settings or Dashboard → click Enable System |
| "Access denied. IP not authorised" | IP not in whitelist        | Admin → IP Whitelist → Add agent's current IP       |

## Agent Cannot Extract Leads

| SYMPTOM                                           | LIKELY CAUSE                          | FIX                                                     |
|---------------------------------------------------|---------------------------------------|---------------------------------------------------------|
| Button greyed out — "Available in morning period" | It is the wrong time period           | Wait for the correct period, or admin can force-extract |
| "All Leads Extracted" — green button              | Already extracted max for this period | Wait for the next period                                |
| "No leads currently available"                    | Lead pool is empty                    | Admin must upload more leads via CSV                    |

## Password Recovery

| SITUATION                   | SOLUTION                                                                                                                                                 |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Agent forgot password       | Admin → Agents → Edit → enter new password → Save                                                                                                        |
| Admin forgot password       | Super Admin → Agents → select the admin → Reset Password button                                                                                          |
| Super Admin forgot password | Stop the server. Delete or rename <code>crm.db</code> . Restart server — a new default admin ( <code>admin</code> / <code>Admin@123</code> ) is created. |

⚠ Deleting `crm.db` will erase ALL data — all users, leads, reports, and submissions. Only do this as a last resort on a fresh install.

## Server Won't Start

1. Verify Node.js is installed: open a terminal and run `node --version`
2. Install dependencies: run `npm install` in the CRM folder
3. Start the server: run `node server.js` or double-click `START_CRM.bat`
4. Open browser at `http://localhost:3000`

## Admin Cannot See New Submissions or Reports

1. Check that agents are active and have successfully logged in.
2. Check that agents have extracted leads (they need leads before they can submit anything).
3. Ask agents to verify they used **Request Report** or **Submit Lead** and received a success message.
4. Click **Refresh** on the Reports or Submissions page.

## Kill Switch — Emergency Use

The kill switch is designed for situations where you need to immediately stop all agent activity:

- Go to **Dashboard** or **Settings**
  - Click **Disable System**
  - All agent logins are blocked instantly
  - Agents already logged in see "System Offline" on their next action
  - To restore access: click **Enable System**
-
